AD fresh - people of various ages, both sexes,
some healthy, others with a variety of physical
illness are being given substances on a regular
basis to determine effect, which is determined
by the results are used to refine the
of certain substances.

Second floor of area 2 contains 2 distinct areas - one a classroom type room with blackboards on which symbols are written, the other a library type room containing many books, some of which have red bindings. These books contain records of people, identified by ~~name~~ numbers who have been used to determine the effects of substances being introduced to their bodies (virus is an example). The results are obtained by autopsy, entered into a data bank and used to refine or restructure future "experiments".

The people used are zombie-like during the introduction of the substances and are "Ade" like people with no home - no one cares about them and no one misses them. Ade-like patients in mental institution
